### **4TH ANNUAL ENVIRONMENTAL SUSTAINABILITY AWARD WINNERS ANNOUNCED**

**January 31, 2022** – For a fourth year, the Village of Glenview is recognizing local organizations that take the lead with environmental stewardship, innovative best practices and community outreach.

The awards will be formally presented by the Village Board of Trustees on Feb. 1 as part of the Village's Environment & Natural Resources Commission's Environmental Sustainability Awards program. Nominations were sought from Jan. 1 to Oct. 15, 2021, from any organization – including businesses, schools, houses of worship and volunteer groups – that serve the Glenview community.

Nominees were considered in three categories: Innovation, Leadership and Education and Outreach. This year's winners are:

#### **Innovation – MFNS Tech, Inc.**

MFNS Tech, Inc., is a startup company that has developed a nanotech product that can be added to foams and sponges to clean up oil spills. This product can help to treat oil contaminated waters with improved results. The founders are Glenview residents.

#### **Innovation – Intrinsic Landscaping**

Intrinsic Landscaping is a Glenview based landscaping company that specializes in designing and building green roofs, walls, and other sustainable landscaping products. They have undertaken numerous projects in the Chicago area.

#### **Innovation – Princeton Village Homeowners Association**

Upon learning about the need to increase habitat for the monarch butterfly, the residents of Princeton Village started a project to repurpose an area where trees were recently removed because of disease. They planted the area with native plants that included varieties of milk weed that are key to the monarch's life cycle.

#### **Innovation – Ten Ninety Brewing Co.**

Ten Ninety Brewing Company is a Glenview craft beer brewer that initiated a process to prevent their brewing byproducts from entering the waste stream. The brewing byproducts are sent to a farm for incorporation into feed for livestock. The brewery completes the cycle by buying the meat from the farm for the restaurant.

### **Education and Outreach – Collective Resource Compost**

Collective Resource Compost is a food scrap hauling company based in Evanston that has been serving residential and business customers in Glenview since 2013. They help people compost their food scraps and have diverted over 1,000 tons of food scraps in the last year and 8,000 tons since 2010. They educate people about the need to compost, how to work with their program, and do outreach in person and via zoom to teach people about composting.

### **Education and Outreach – Solid Waste Agency of Northern Cook County**

SWANCC's Recycling and Education coordinator educates people in the agency's 23 member communities on recycling information. During the pandemic, SWANCC has kept the communities educated via Zoom and in person. The organization also worked to increase the amount and types of materials that are recycled in the community.

### **Leadership – Friends of Downtown Glenview**

The Friends of Downtown Glenview collaborated with the Friends of the Chicago River to create a new cleanup site in downtown Glenview. They worked with village staff to get the cleanup site established.

### **Leadership – The Beck, Hurvis and Straus Families and the Glenview Park District**

The Beck, Hurvis and Straus Families and Glenview Park District are being recognized for their work developing and supporting the Judy Beck Grant program. This year the program awarded six grants that included supporting monarch butterfly habitat, funding compost awareness, and the food forest at The Grove. Judy Beck was a member of the Environment and Natural Resources Commission.

### **Leadership – Greenwise Organic Lawn Care & Landscaping**

Greenwise is an organic lawncare company that practices natural lawncare. They use lower impact lawn equipment that runs on propane or electric power, which are quieter than gas powered equipment. They also have outreach activities that educate people about natural lawn care and how native plants can improve the ecosystem one yard at a time.

The Village encourages local organizations to adopt practices that help prevent pollution, reduce waste, conserve energy, reduce emissions to air and water, and boost recycling. Meeting these sustainability challenges starts at home, in the workplace and in our schools.

The Village wants to highlight the success stories of organizations within the community so that, if replicated, others will be spurred to collaborate and share strategies, policies, procedures and best practices for environmentally sustainable practices.
